

As part of an upgrade to this existing shopping development, we were asked by the architect to come up with a solution to provide a seating facility for high volumes of shoppers. Our Sheldon Bench (SBN335) with FSC Hardwood Iroko slats and grey granite plinth mounts was the ideal solution as these can be quickly installed to existing finished grade with no foundations required. This saved significantly on cost and importantly avoided closure of the area when the work took place as the installation was completed out of hours.
