

**Project Name:**  
Bath Spa University  
Newton Park Campus

SUPPLY +  
INSTALL

**Contractor:**  
Skanska UK

**Architect:**  
Illman Young

We were asked to provide a solution to the requirement for curved cycle shelters to match the stunning fascade of the building at this prestige university development. Our engineer designed the Malford (MCS201) Shelter with a curved roof especially for this project and we are delighted with the visual outcome. The Malford cycle racks (MCR200) in stainless steel give a quality feel to this scheme.
